AutoCAD History The name AutoCAD was used as the brand name of the first commercial edition of AutoCAD, released in December 1982 and available for the Apple II, TRS-80, and IBM PC (among other computers). In March 1983, the AutoCAD name was also licensed to other commercial CAD software products. AutoCAD is currently available for the following platforms: Windows, macOS, iOS, and Android. In 1999, the first version of AutoCAD to feature the "academic" trademark, "AutoCAD LT", was released. In 2001, Autodesk launched an Autodesk University web site to provide free CAD training and instruction to students and teachers. From these roots emerged a range of desktop, mobile, and cloud-based offerings. In 2010, Autodesk released AutoCAD Architect, a version of AutoCAD for architects and designers. Also in 2010, Autodesk unveiled the AutoCAD cloud service, which allows users to create, update, and view drawings, BIM models, and 3D solids, with cloud-based storage, connectivity, and security. This new software was initially offered as a subscription service. In May 2013, Autodesk upgraded AutoCAD Cloud to version 1.4, with new features including cloud-based rendering, cloud-based measurements, and improved collaboration and organization for models. In 2015, Autodesk released AutoCAD 2017. This version supports multitouch screen input on Windows computers. New features include rendering with cloud-based rendering and the ability to edit in the cloud. While AutoCAD is best known as a drawing and design program, AutoCAD is also used for a range of other tasks such as data conversion and analysis, including: AutoCAD 2017 features: Mixed 2D/3D rendering Simplified features and toolbars Enhanced 2D capabilities Ability to edit, import and export PDF files Cloud-based rendering and cloud-based measurements AutoCAD is available in 4 different versions: Academic, Architect, AutoCAD LT, and AutoCAD 2017. The range of capabilities of these different versions of AutoCAD depends on the licensing agreement with the user. Source Code Changes AutoCAD applications are built using a proprietary version of the AutoLISP programming language. AutoCAD is supported by a dedicated team of programmers who

Please look at this question: What does 'mode: public' mean when I create a new tag? The "status-completed" and "status-review" tags are no longer needed. Now, they were used only to describe the intent of the question. I've just removed them. Should I remove all other "status-" tags or just "status"? A: I'd be somewhat hesitant to delete the other status tags as well. Perhaps having a Wiki makes sense for the main tags, but I'd feel more comfortable in deleting tags that just aren't getting used. Having said that, I've just hit the 1k rep threshold so I can suggest edits. Q: Algorithm to return elements common to two sorted lists I have to sort a file by the contents of one field, and then return the next element in the sorted file that is found in both sorted files. So, something like this: def next_common(a, b): return element in both sorted lists A: This is the algorithm you are looking for. You need to split the list into two parts, and then sort the smaller part. Then see if the common element exists. The minimum number of comparisons to determine if it exists is n/2. If it exists, return the element and stop. Otherwise go back to 1, and so on. Keep in mind that if the sorted input lists were not monotonic (eg, sorted by price), this will not always be a good algorithm. Relative values of extraction of infected cancellous bone with phosphate-buffered formaldehyde and gentian violet. The practicality of tissue preparation with phosphate-buffered formaldehyde (PF) and gentian violet (GV) was evaluated. Bone biopsies were taken from 10 human cadaver femora and stored in either PF or GV for 7 days. The specimens were tested with a fluorescent DNA probe to determine the percentage of cells which retained the probe. The results indicated that the cells which retain the probe were af5dca3d97

Light and electron microscopical study]. Endoplasmic reticulum in Purkinje cell bodies was electron-microscopically demonstrated by means of the Kontaktron method. Our results, obtained by confocal laser microscopy, showed the presence of large rod-shaped bodies of endoplasmic reticulum in the cytoplasm of Purkinje cells. These bodies were found to be more common in the upper cell bodies than in the lower ones. Endoplasmic reticulum was also demonstrated in the neuropil of Purkinje cells, especially in the parallel fibers of their terminals.The influence of the anesthetic mixture on analgesia after surgical removal of impacted mandibular third molars. This prospective clinical study evaluated whether the choice of anesthetic mixture influences the postoperative analgesic effect after surgical removal of impacted mandibular third molars. Ninety ASA physical status I and II patients were randomized into 3 groups according to the type of anesthesia received. Group 1, a mixture of bupivacaine, fentanyl, and flucocinonide; Group 2, lidocaine with 1.5 mg/kg epinephrine and fentanyl; and Group 3, 0.25% bupivacaine with 1 mg/kg ep
